

DSI Releases Newest Versions of Unibar[®] Enterprise Labeling Software[™]

Announcement includes release of dcLINK service packs and rebranding of Unibar product line

Overland Park, Kansas (August 24, 2009) — Data Systems International[®] (DSI) today announced release of the newest versions of the popular Barcode 2000[™] multi-platform label printing solution developed by its recently acquired Unibar Inc. subsidiary. With this new release, DSI has rebranded the products as part of the Unibar[®] Enterprise Labeling Software[™] (ELS) product suite:

- **Unibar[®] ELS Standard[™]** is high-performance label design and printing software that operates on UNIX, Linux, and Windows platforms, using data from standard applications and databases to output barcode labels.
- **Unibar[®] ELS Enterprise[™]** adds advanced barcode functionality and RFID label printing to Unibar ELS Standard, as well as optional XML capabilities to support XML printing from Oracle Warehouse Management System (WMS), Oracle Mobile Supply Chain Applications (MSCA), and other XML applications.

This latest product release includes new barcode symbologies that give users more flexibility, capacity, and options for their barcode and RFID labels. The release also includes enhancements to the user interface and help systems.

Unibar ELS Enterprise is the preferred barcode and RFID printing solution for DSI's dcLINK[®] mobile data collection solution. DSI also released service packs for dcLINK[®] that enable dcLINK 4.2 and dcLINK 5.0 to utilize Unibar ELS Enterprise as their label printing solution.

“We are pleased to announce that dcLINK fully supports Unibar ELS Enterprise,” said Gary Delancy, Vice President of Development for DSI. “DSI will continue to invest in the development of our Unibar offerings as standalone products and for integration into our mobile enterprise solutions.”

DSI, which acquired Unibar Inc. in May 2009, will continue to rebrand Unibar products under the Unibar Enterprise Labeling Software (ELS) umbrella.

About DSI

Data Systems International (DSI) is a leading single-source provider of global enterprise mobility solutions that improve clients' bottom-line results by mobilizing operations and automating processes with real-time access to enterprise applications anytime, anywhere.

From concept to completion, DSI provides enterprise mobility solutions that enhance productivity and operational performance, including: dcLINK mobile automated data collection software with barcode, RFID, voice, and mobile applications; enterprise labeling solutions; wireless infrastructure and devices

for mobile computing; servers, storage, and security solutions for the data center; and professional services that include consultation, implementation, training, and 24x7 global support.

DSI serves clients worldwide through its offices in the U.S., U.K., Canada, and Australia, and its global network of partners. For more information about DSI's 30 years of dedicated service to clients and our community, please visit www.DSIconline.com.
